Software Development

Projects

Dockerized Web Stack

- Built a complete infrastructure using Docker to host a WordPress website with proper containerization and orchestration
- Configured and deployed multiple services including NGINX with TLSv1.3, WordPress with php-fpm, and MariaDB, each running in separate custom Docker containers
- Implemented secure networking with Docker networks and persistent data storage using Docker volumes
- Created custom Dockerfiles for each service without using pre-built images, ensuring full control over the environment
- Automated the entire setup using docker-compose for efficient deployment and management
- Tools Used: Docker, docker-compose, NGINX, MariaDB, WordPress, Shell scripting

Webserver

- Created a lightweight web server from scratch using C++98.
- Handled thousands of simultaneous connections with non-blocking I/O
- Supported file hosting, uploads, and dynamic scripts (PHP/Python via CGI)
- Implemented basic HTTP methods(GET, POST and DELETE) and custom config file parsing
- Focused on performance, flexibility, and clean request handling
- Tools Used: C++

Pong Web Platform

- Developed comprehensive user management system with secure authentication and authorization mechanisms
- Built interactive dashboard interface for real-time data visualization and user activity monitoring
- Implemented user profile management with customizable settings and privacy controls
- Created blocking functionality to manage user interactions and enhance platform safety
- Designed and implemented real-time game logic with live state synchronization between users
- Deployed and managed the application using Docker with environment-based configuration
- Tools Used: fastify, sqlite, WebSockets, Docker, next.js, react

Technical Skills

Programming: C, C++, JavaScript, TypeScript

Web Development: HTML, CSS, Next.js, React, Fastify, Tailwind CSS

Tools: Docker, Git

Soft Skills

- Ability to work efficiently in team-oriented environments
- Self-motivated learner with fast adaptation to new technologies
- Clear communication of technical ideas and solutions
- Effective problem-solving and debugging skills.

Spoken Languages

- Arabic
- French
- English
